Authorized official:	Georges Matar	
Classification:	H045 3/00	
Title:	Eliminator of common stereo source signals	

---

Date: May 13, 2005

**AMENDMENT 2**

*The applicant hereby modifies the claims of the international application, according to article 19 and subsequent to the report by the authorized official.*

With respect to the letter of March 31, 2005 and due for reply on May 31 as per article 19, please amend the present application as follows:

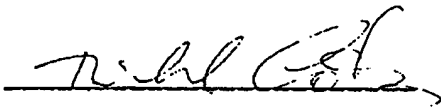

**Claims**

Please replace the claims of the original application with the amended claims in Attachment A. In Attachment B you will find a copy of the claims with their amendments noted and in which the added text is underlined and the removed text is struck out.

**REMARKS**

1. The text of all the original Claims 1 to 16 was modified as per the rewording suggested by the examiner so as to eliminate any terminology which might be confusing and to make the application more comprehensible. The text of Claim 3 has been modified to specify that the common parts comprise parameters defined as being frequencies, amplitudes or voltages and it is the blocking means of the device which create generation of a second stereo source different to the first. New Claims 5, 8, 9, 12 and 13 have been added. No new subject matter has been added.

2. Following the modifications incorporated here, we submit that the application thus modified renders the patent grantable, which we respectfully request.

A handwritten signature in black ink, appearing to read "Richard Côte", written over a horizontal line.

Richard Côte, inventor

A handwritten signature in black ink, appearing to read "Simon Roy", written over a horizontal line.

Simon Roy, inventor
